

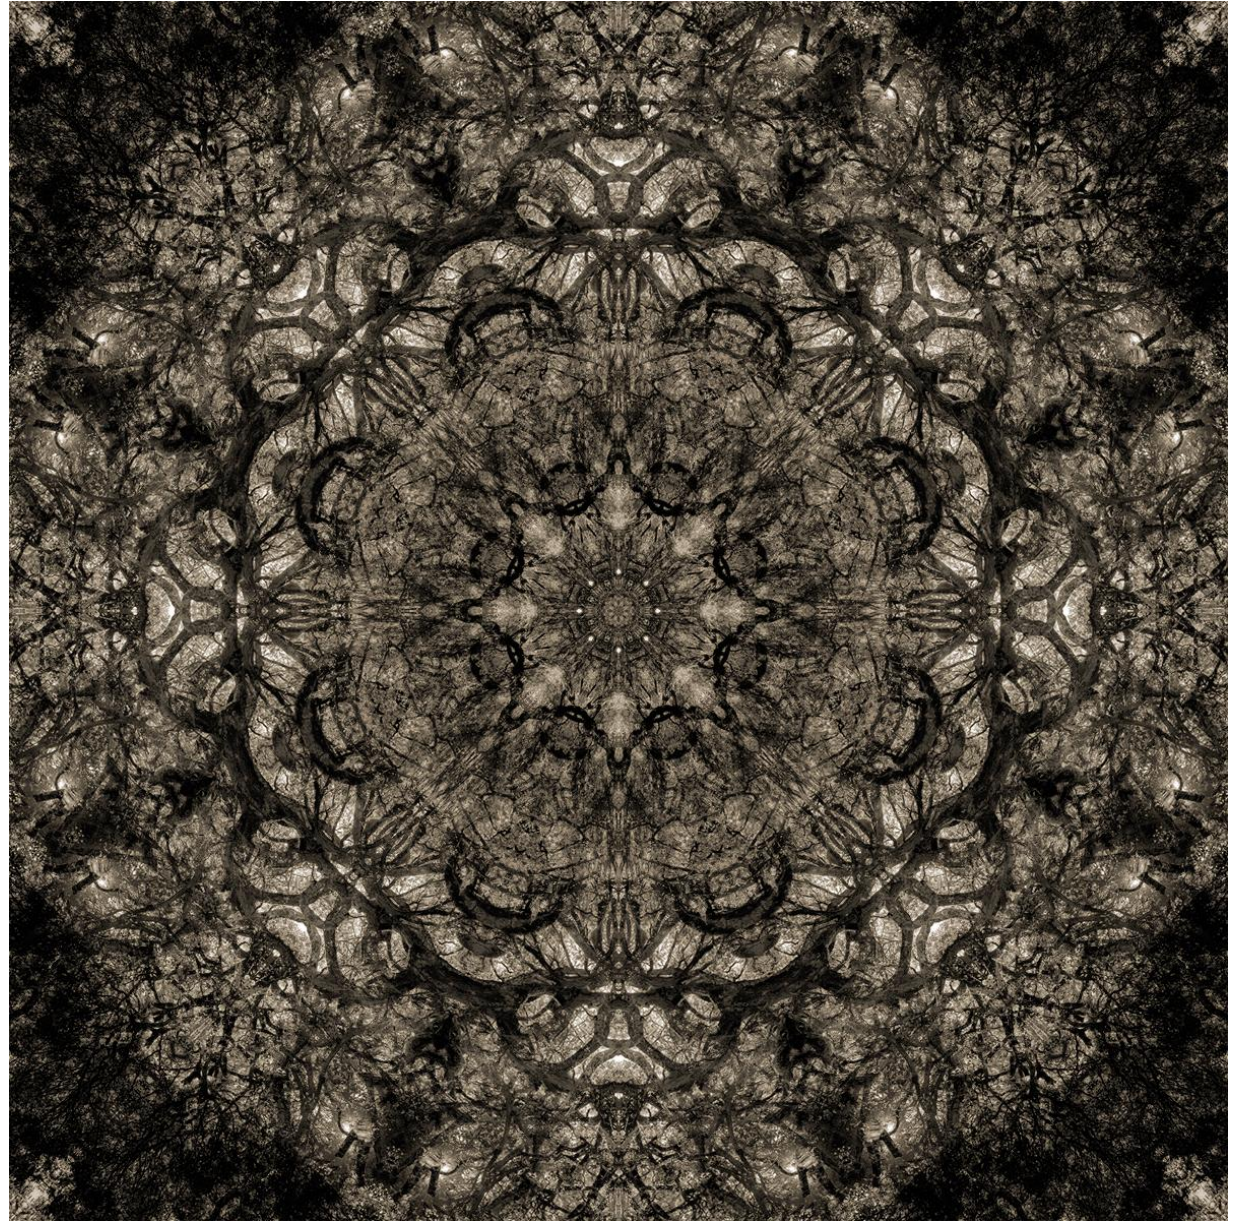

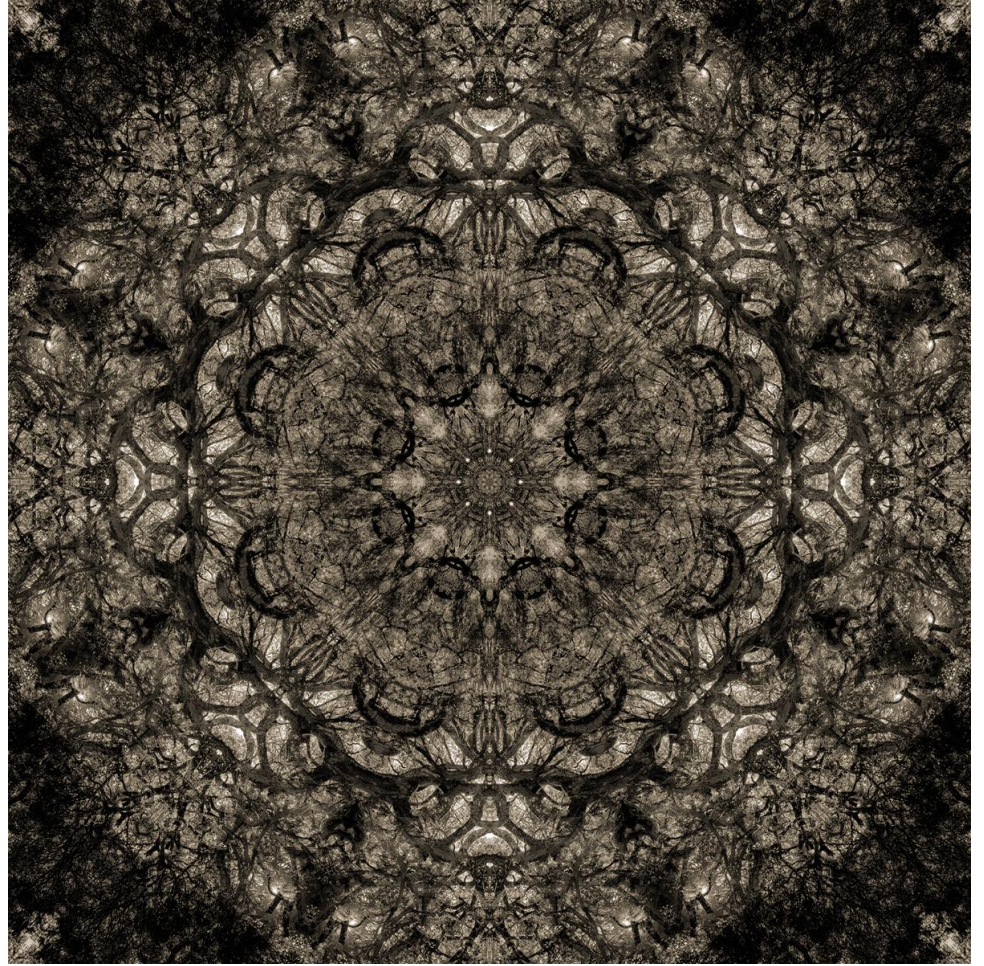

Photographic Kaleidoscopes

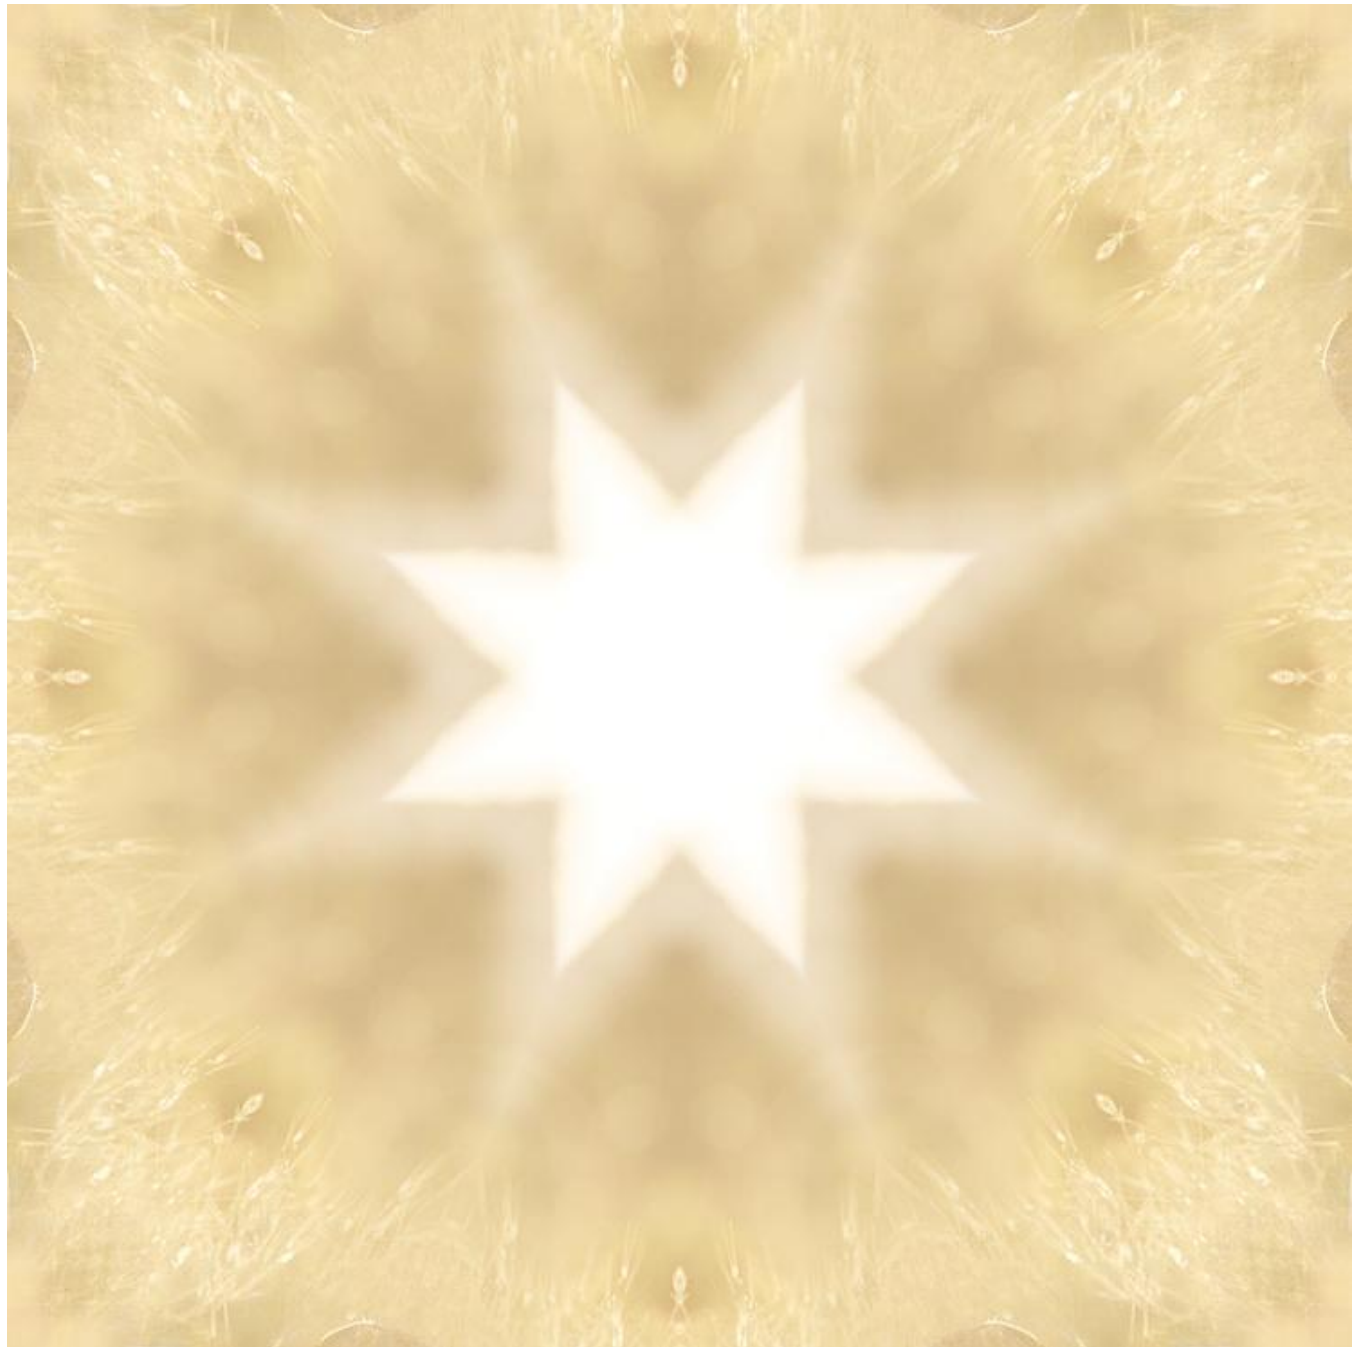

Photoshop Project #3

**We will be creating
kaleidoscopes out of
our photos next
week so you will
need to have 3
photos taken! Make
sure at least one is
in black & white and
one is in bright
colors!**

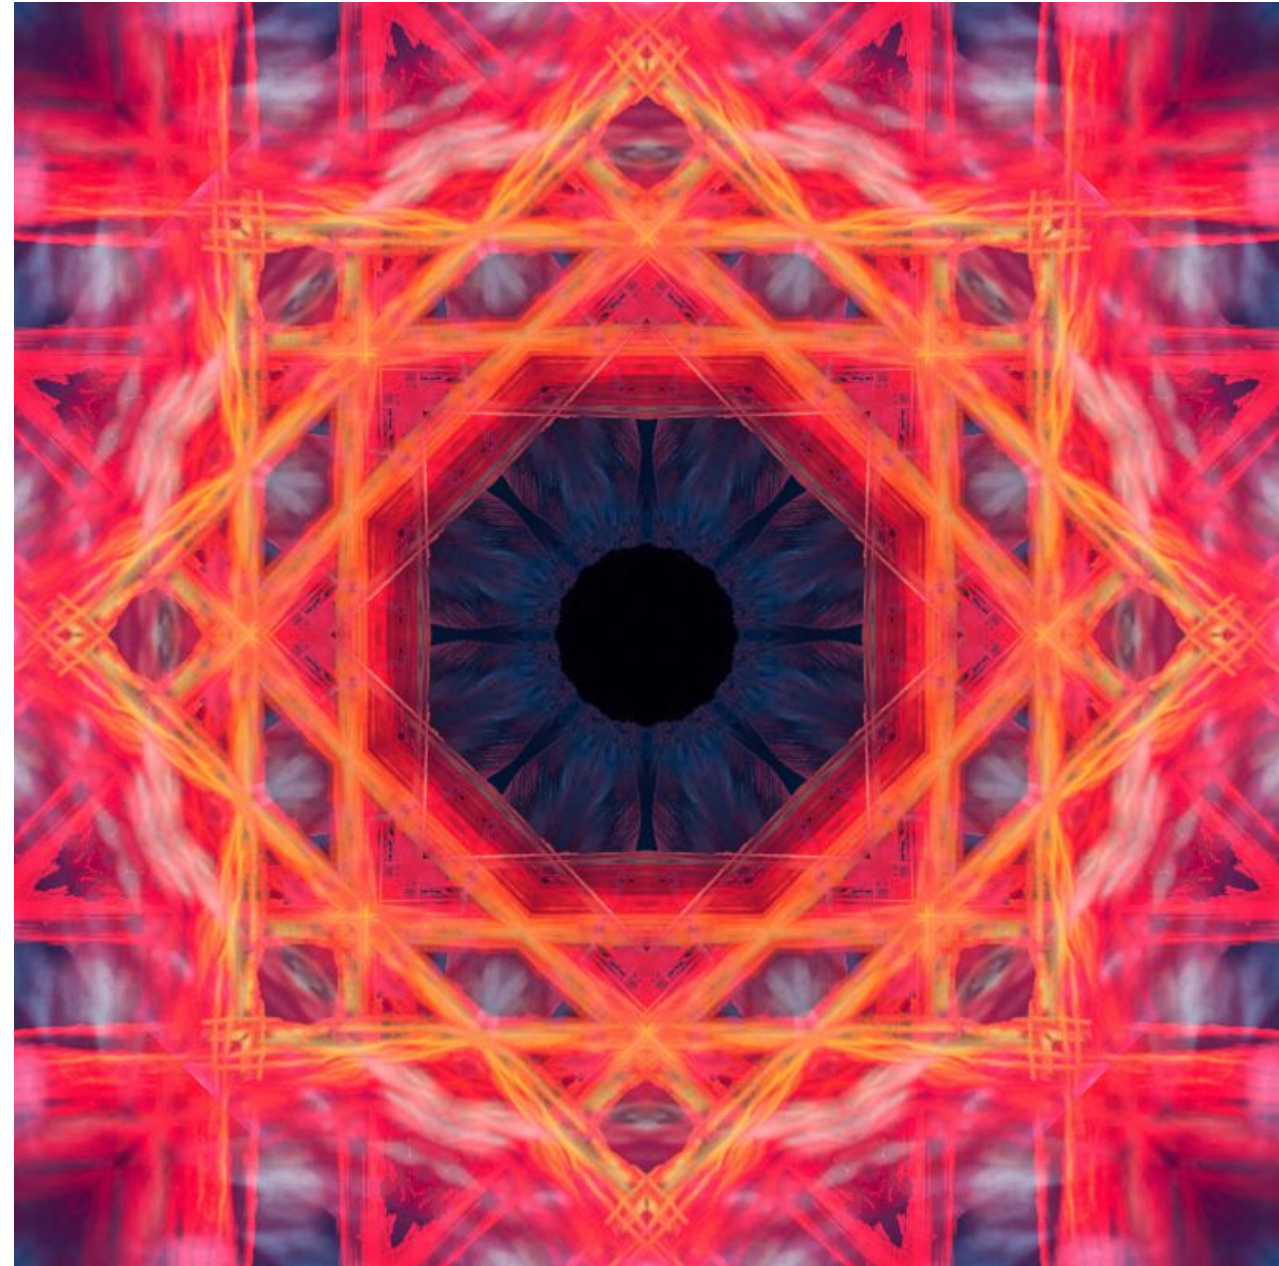

Low contrast images with very similar colors do not work very well for creating a kaleidoscope.

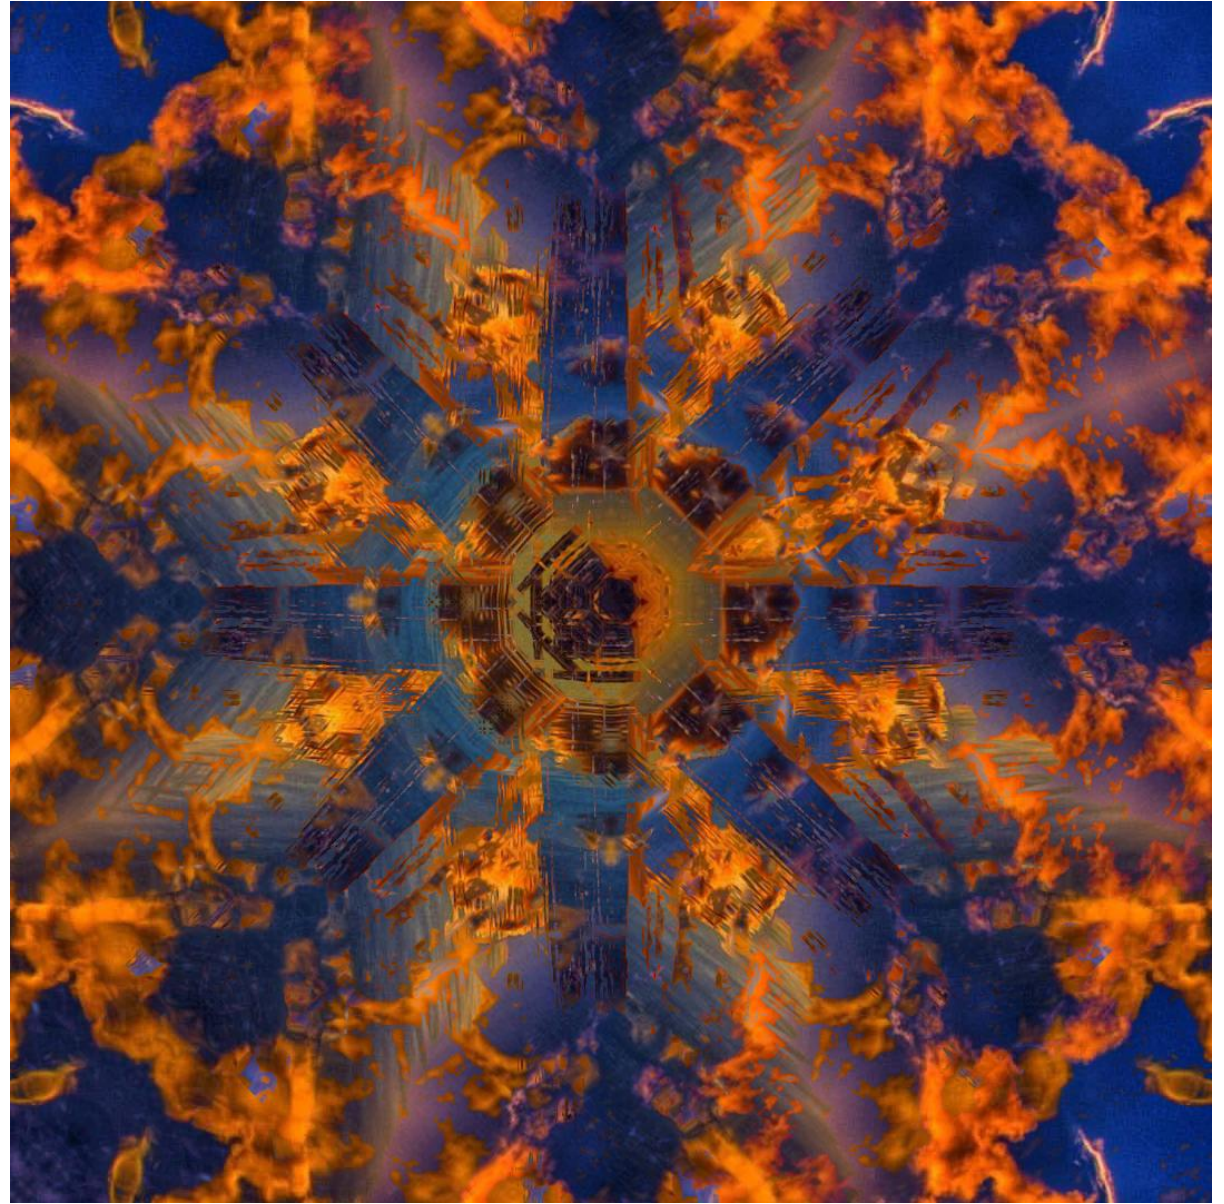

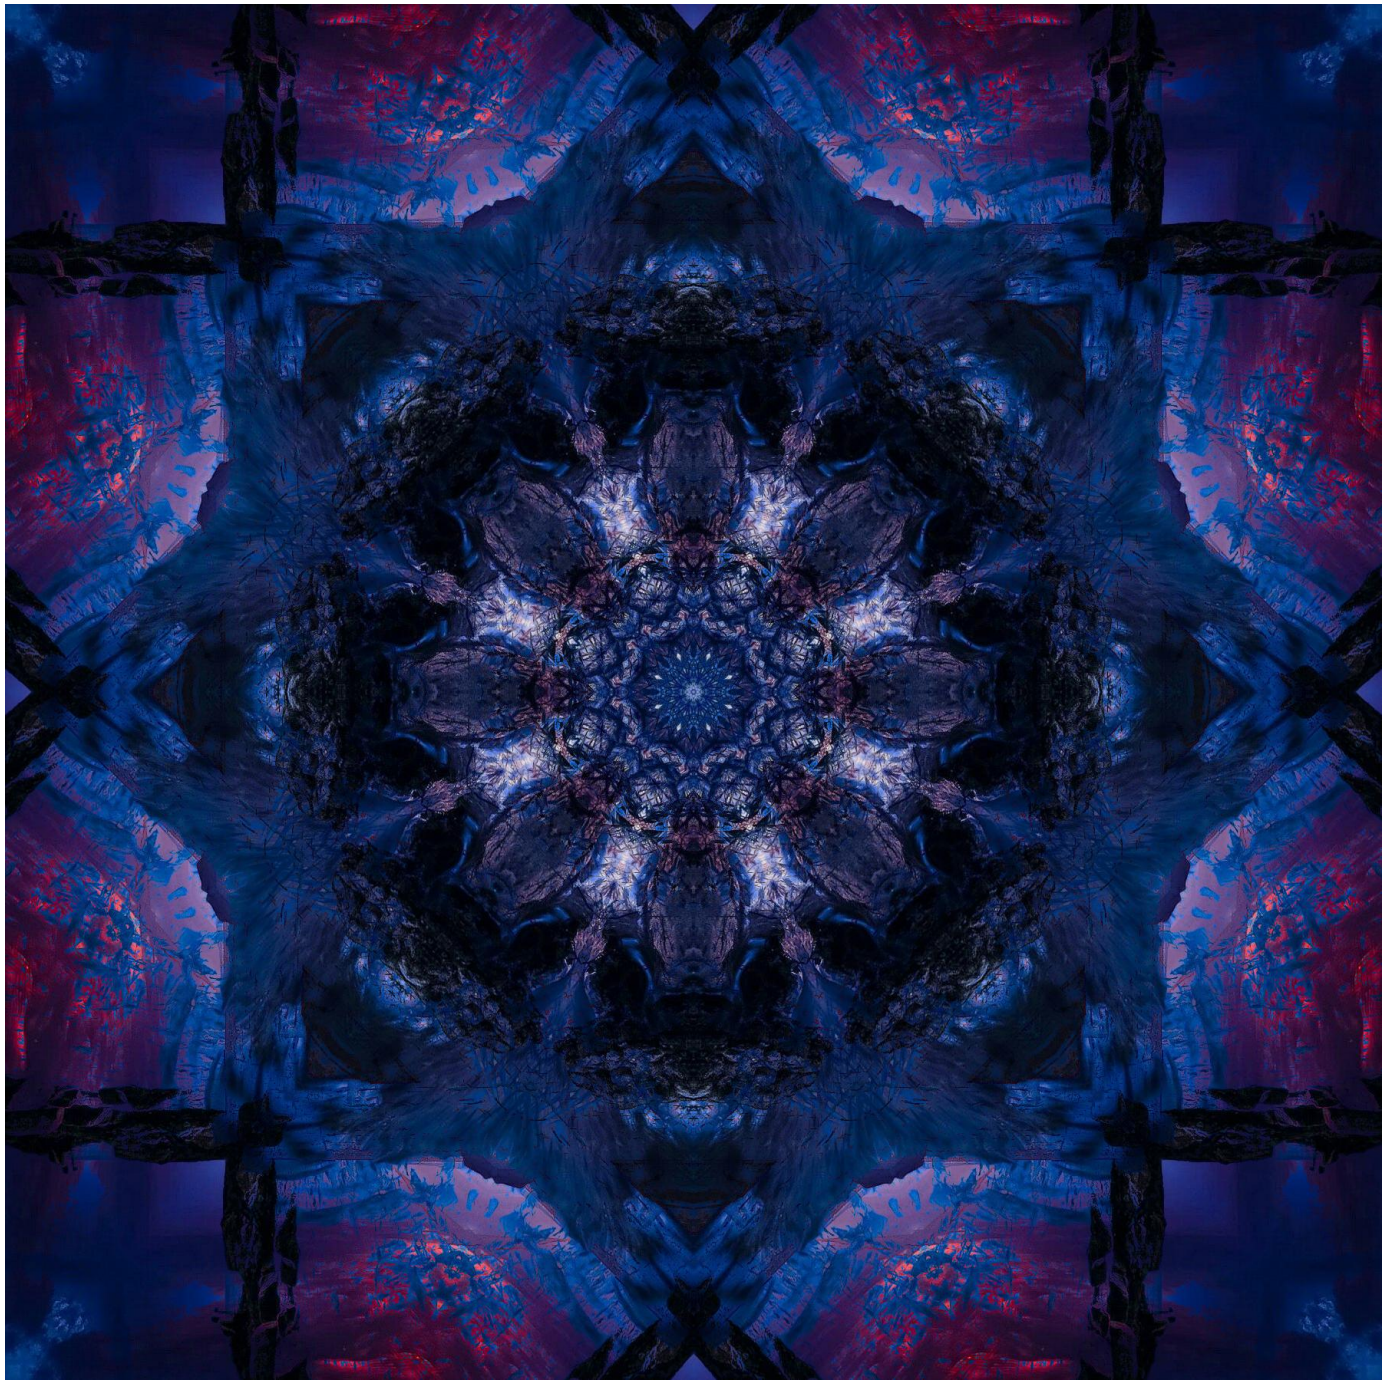

Images with very similar colors but higher contrast work a bit better.

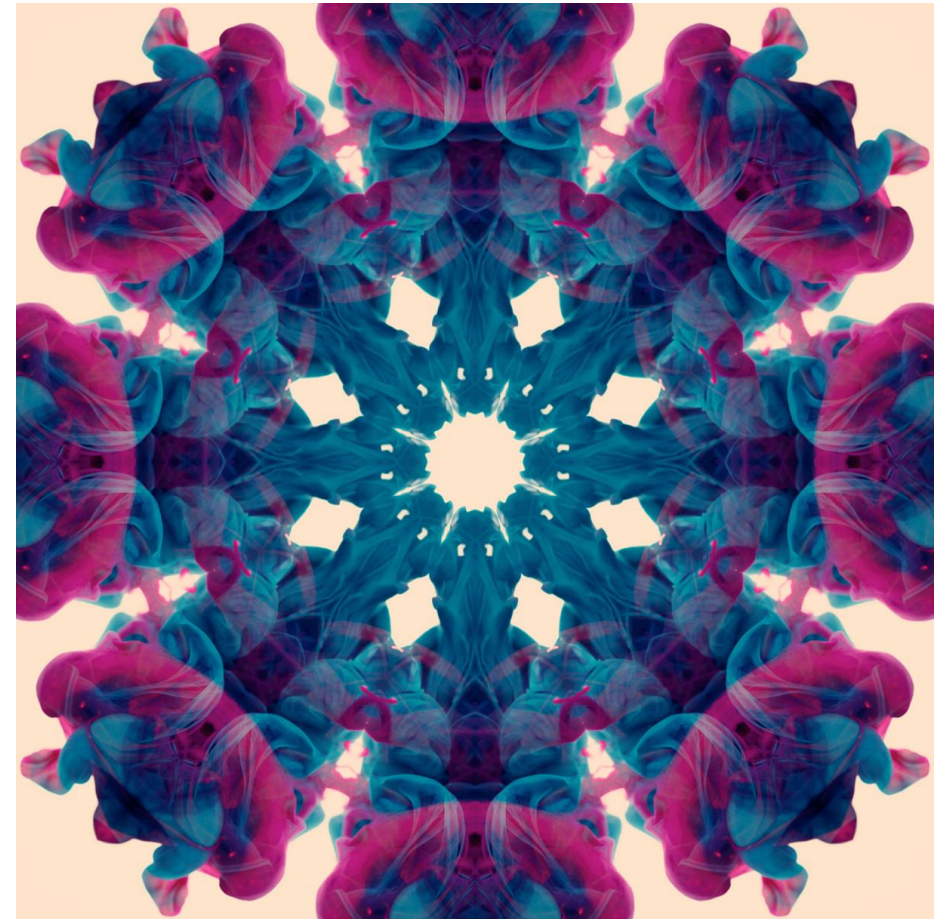

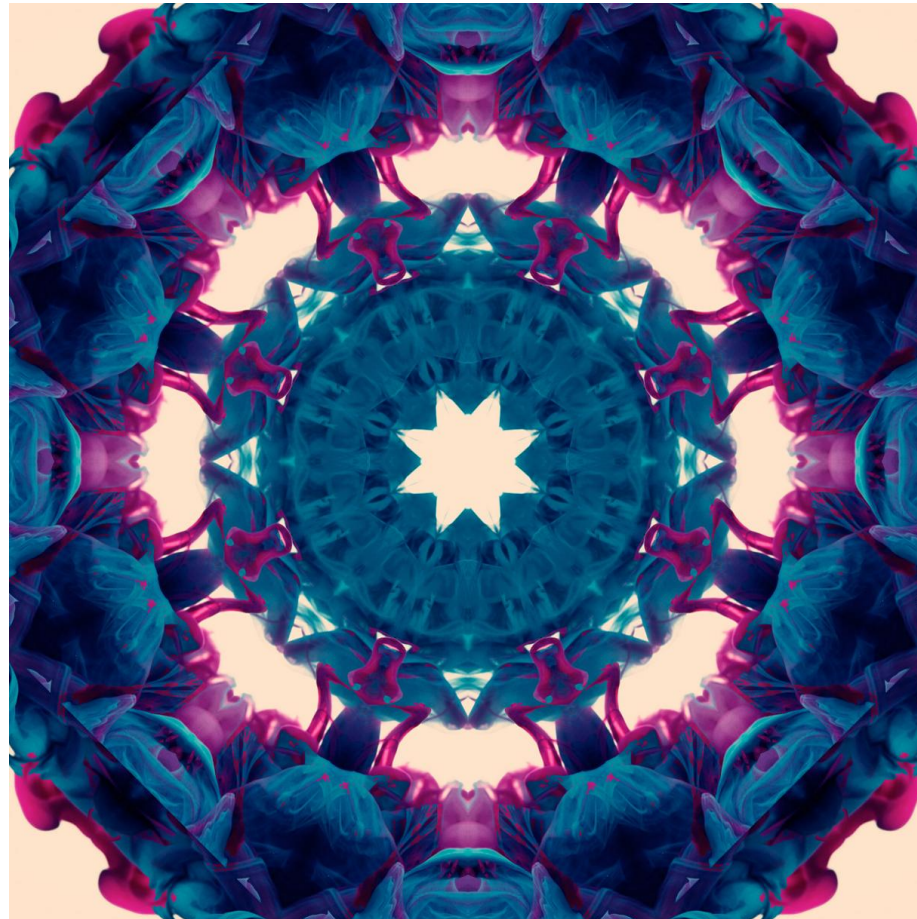

Images with higher contrast and bright contrasting colors work much better for creating a kaleidoscope.

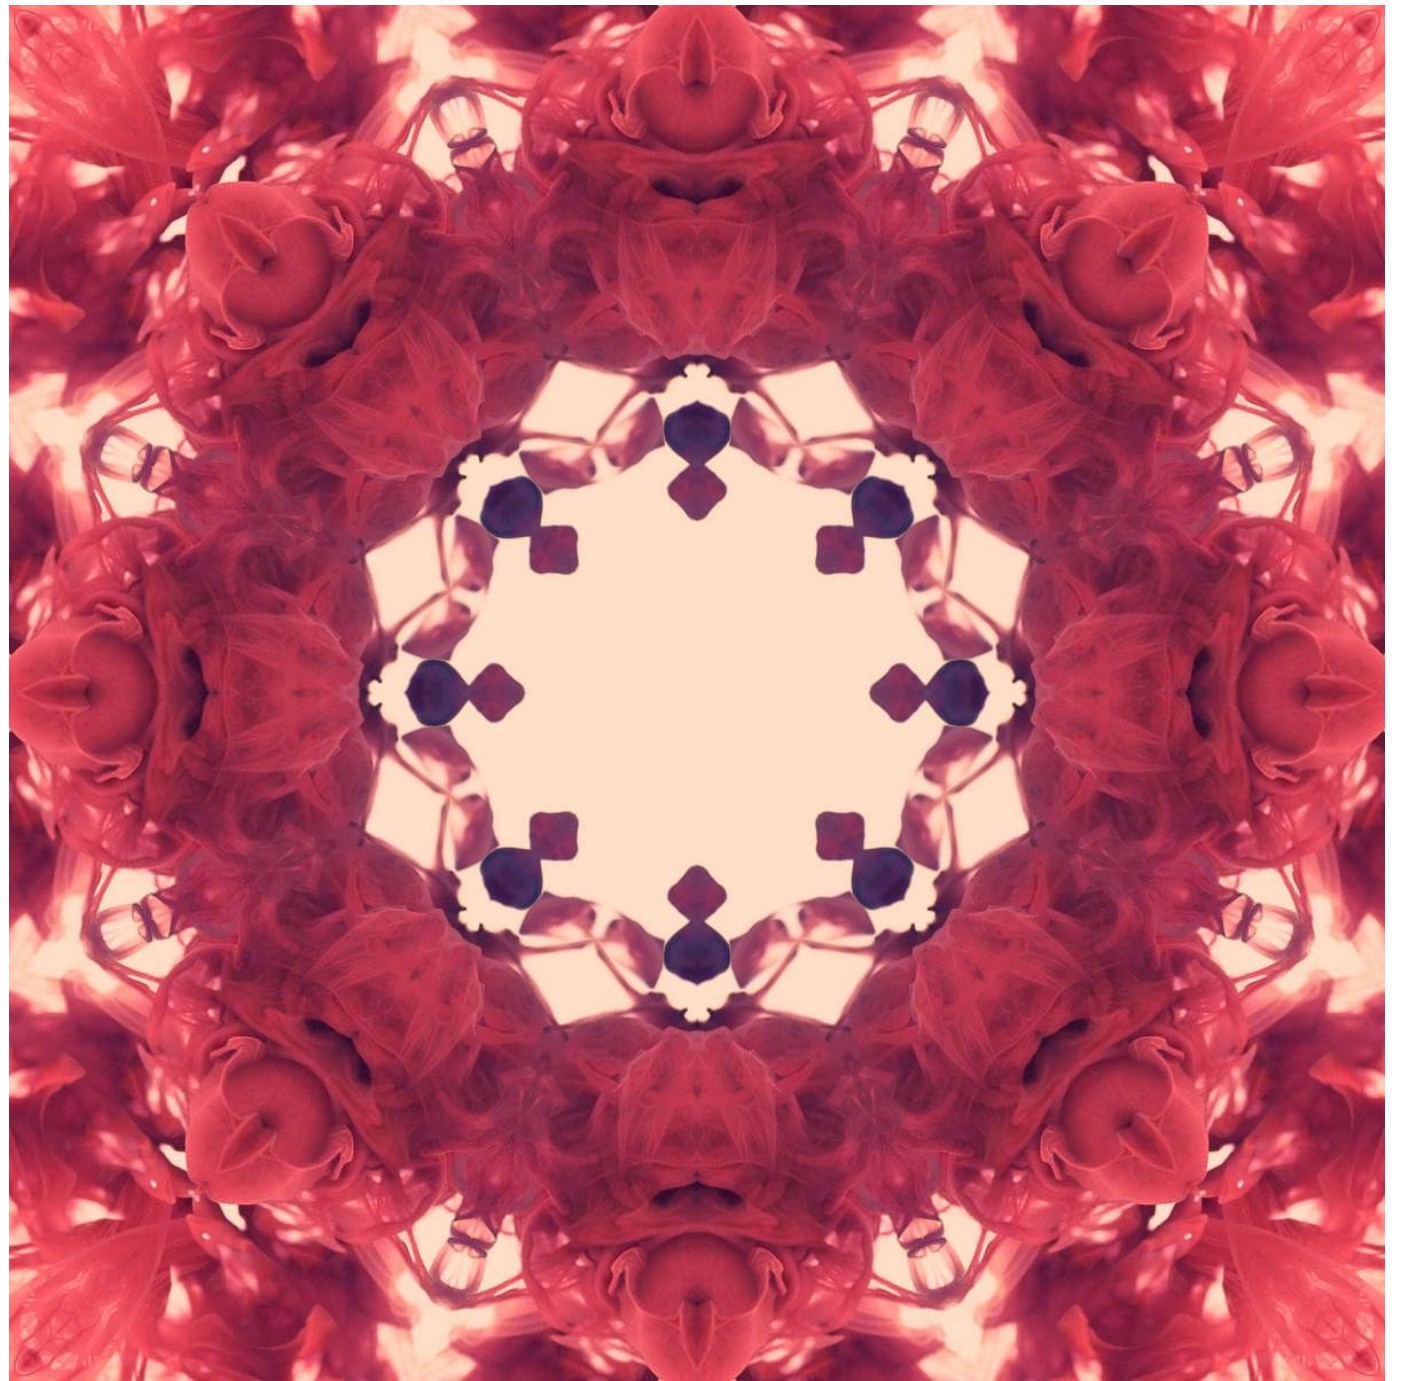

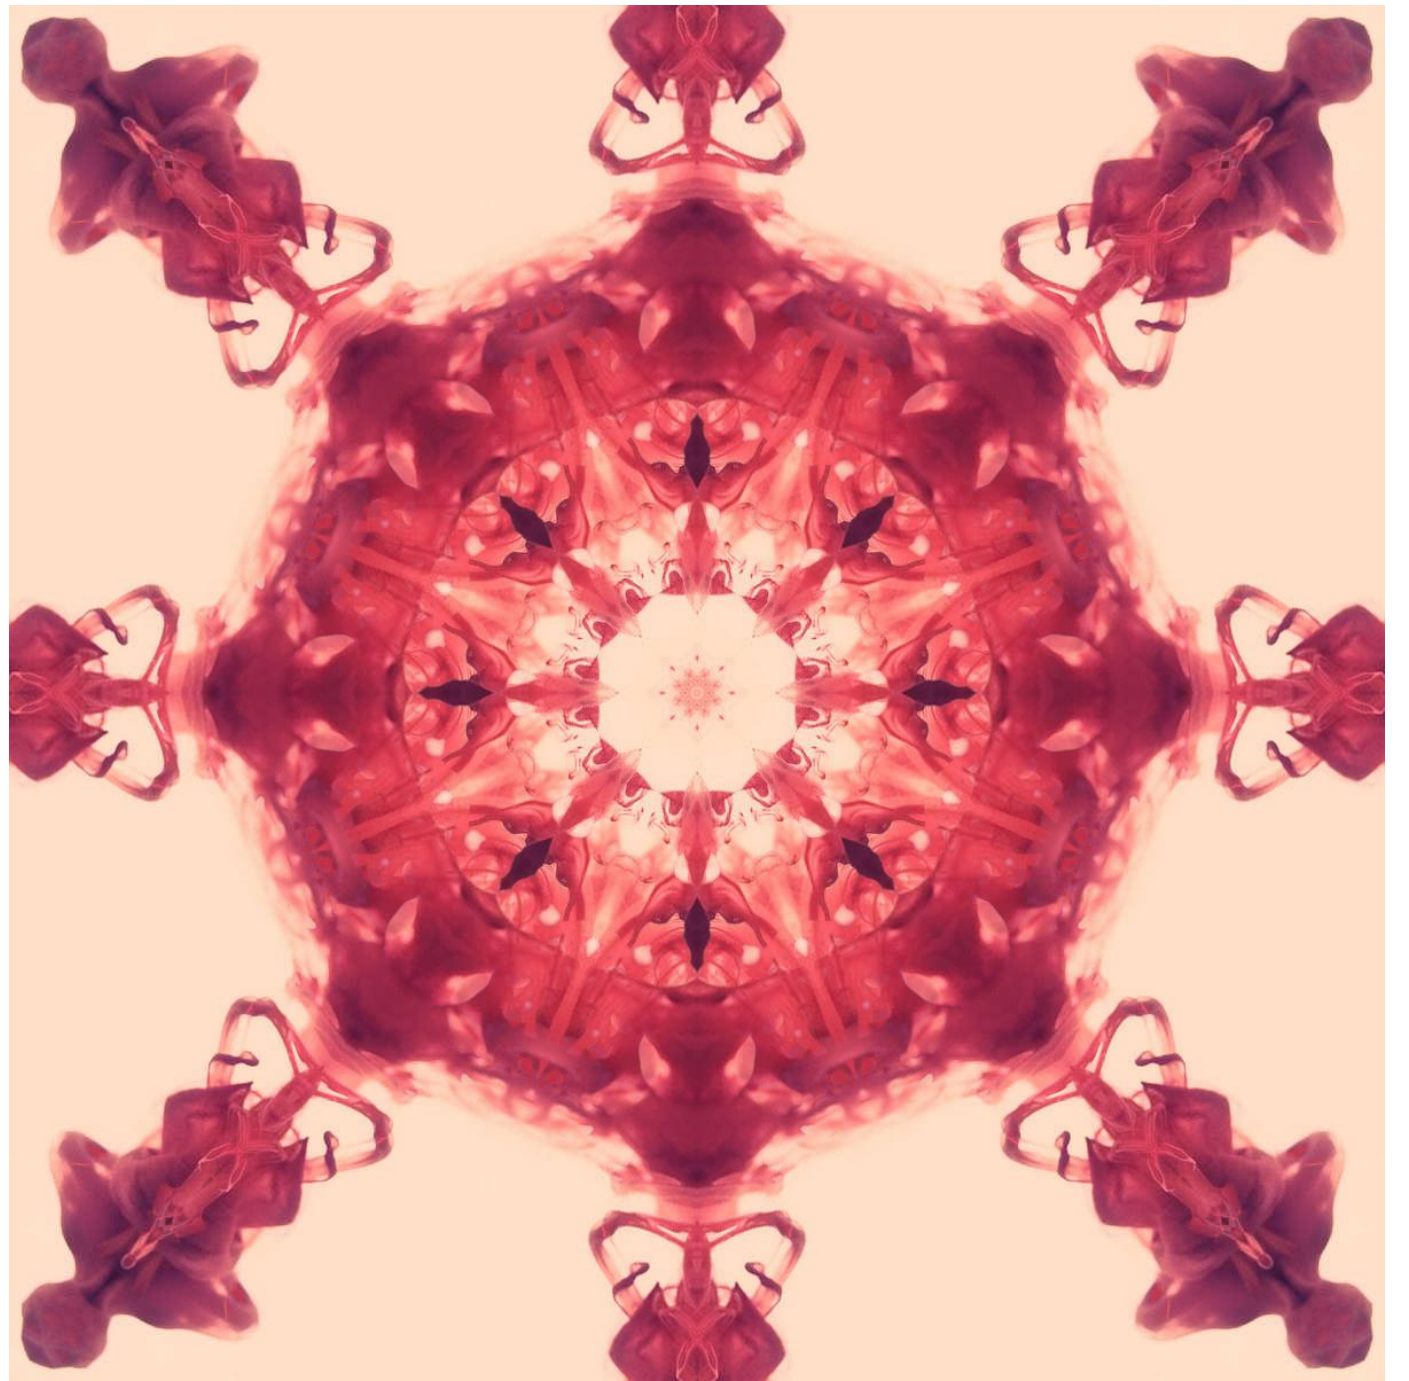

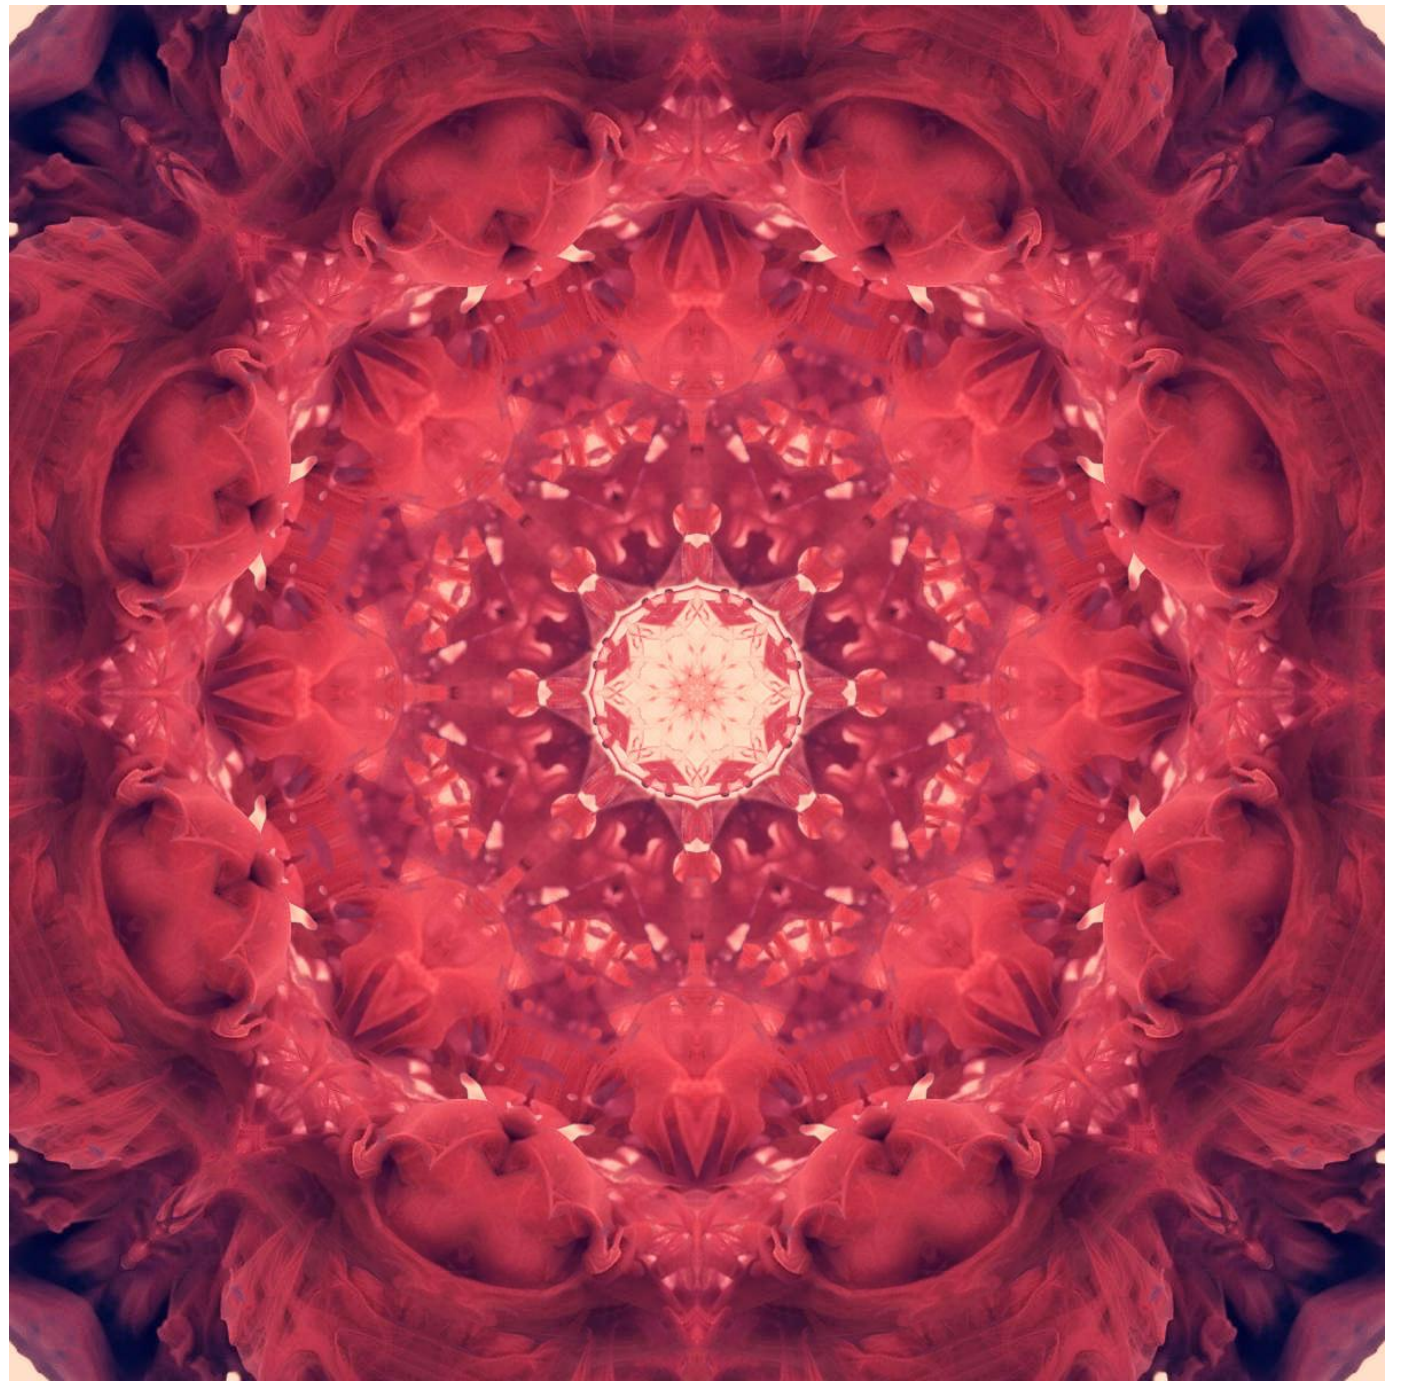

There are a lot of different kaleidoscopes that can be made from one image, so don't get hung up on there being a "CORRECT" kaleidoscope. As long as your kaleidoscope is symmetrical and has 8 repetitions in it you are doing fine!

**Bright contrasting
colors work really
well in
kaleidoscopes as
they create areas of
detail and interest.
You will need to take
at least 1 photo
using bright colors.**

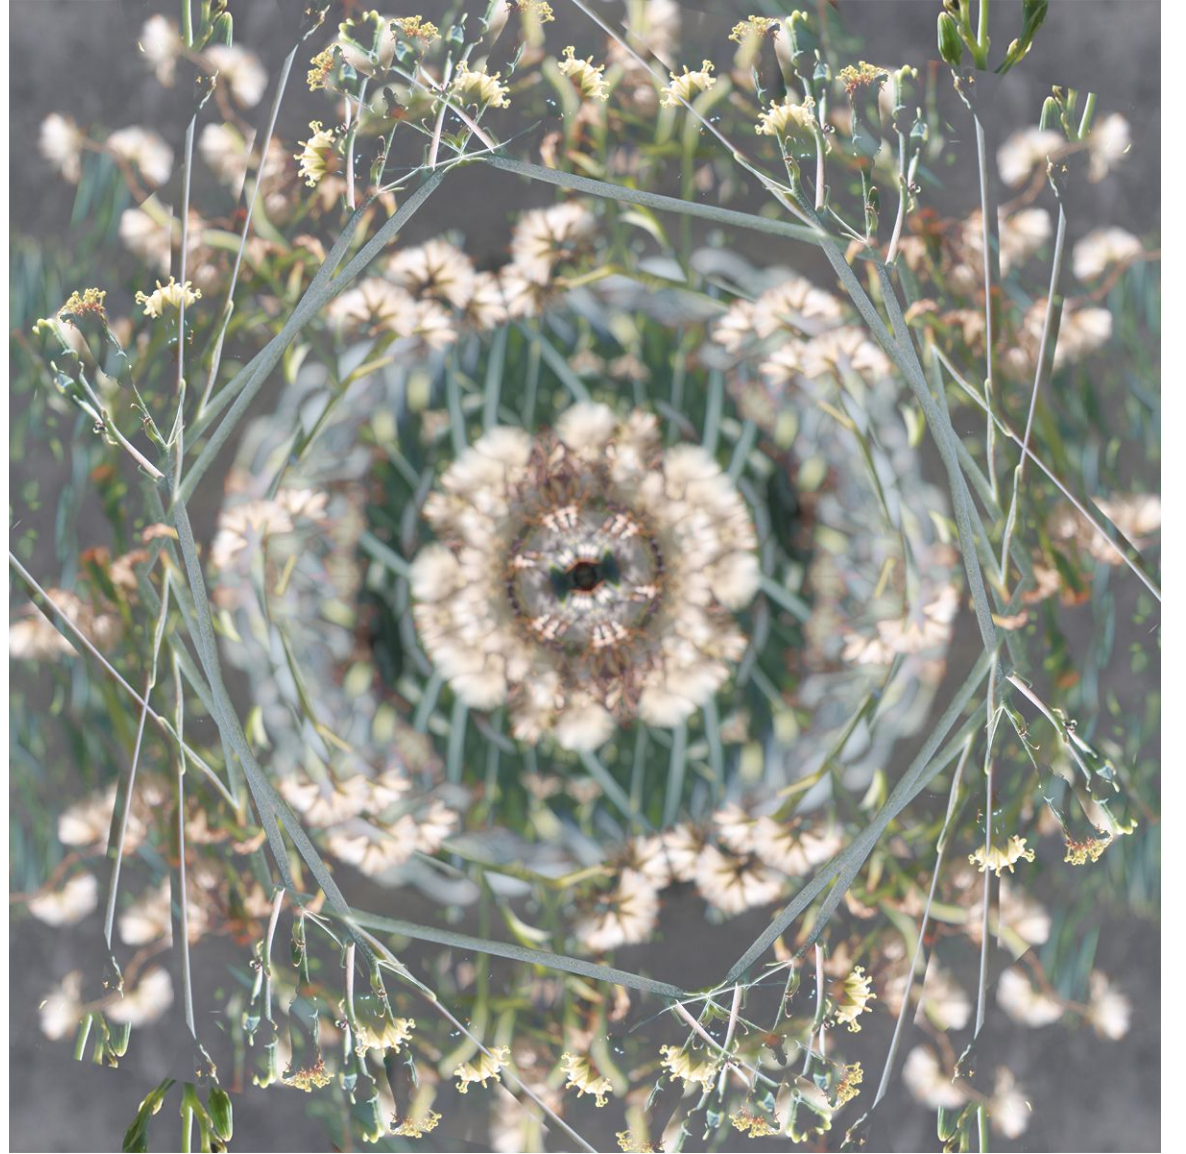

Patterns with some irregularities work really well for kaleidoscopes.

Take at least one black and white photo for this assignment!

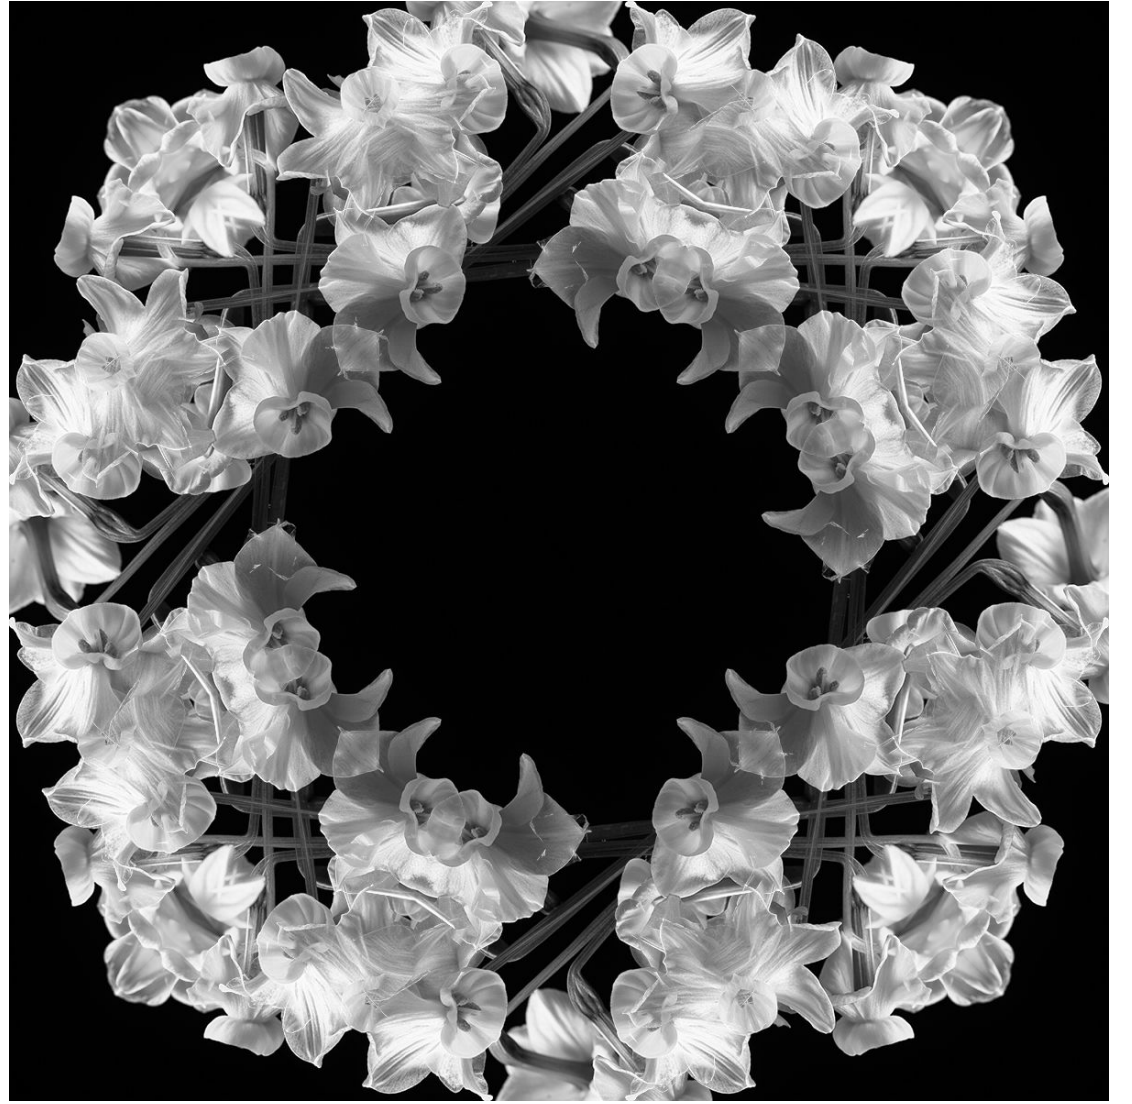

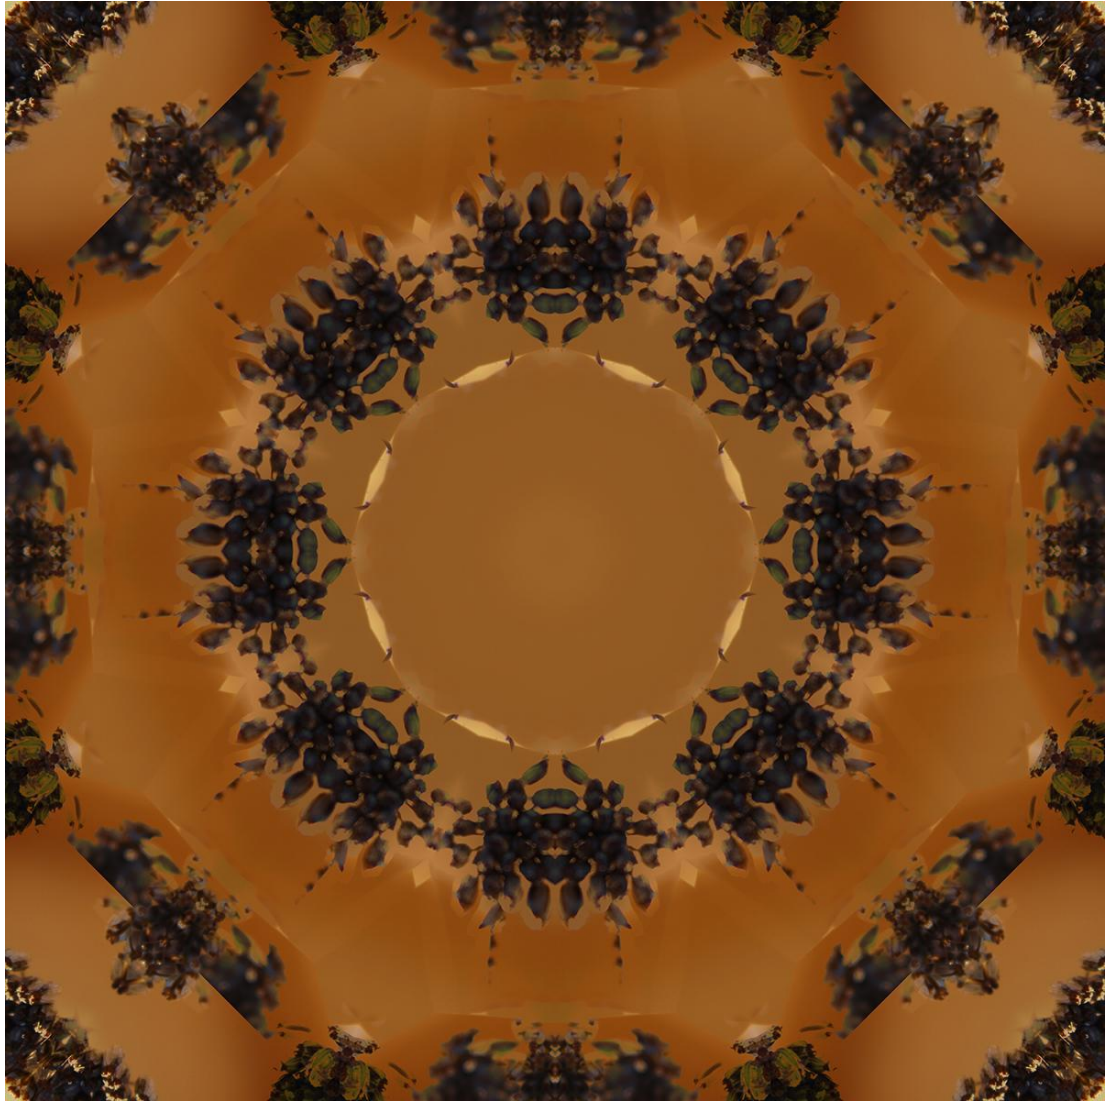

Natural subjects, like plants, work really well because the individual stems and branches create lots of detail and areas of overlap.

Be careful about too much empty space in your photos. It will show up in your final kaleidoscope! This photo originally had lots of empty space in it.

**Editing your photos
BEFORE you turn
them into
kaleidoscopes is
highly
recommended!!! It
will help you control
the look and feel of
your final work.**

We will be creating kaleidoscopes out of our photos next week so you will need to have 3 photos taken! Make sure at least one is in black & white and one is in bright colors! If you don't get this done in class then it is HOMEWORK!!!! You will need to make sure that you have transferred your files to your computer BEFORE Monday/Tuesday class.
